

PREFERRED NUTRITION

Immuno-Care™

ONE-A-DAY

Immune System Support for:

- Seasonal Allergies
- Fibromyalgia
- Coughing and Wheezing
- Chronic Colds & Flu
- Joint Pain & Stiffness

FIGHT SEASONAL ALLERGIES
GUARANTEED TO WORK!

Some immune systems need help...

The immune system is exceedingly important and complex, and with the current bombardment of pesticides, herbicides and above all, radiation, it needs all the help that it can get. A multivitamin alone simply won't cut it. Nature has provided a broad range of nutraceutical compounds to help your immune system do its job and do it better! Immuno-Care is an effective treatment for:

Seasonal Allergies, can elicit a host of symptoms that can be very uncomfortable to deal with. They include; sneezing, watery eyes, runny nose, itching, blurred vision, cramps, joint and muscle pain, and fatigue to mention a few. Allergies are not just a seasonal irritant, many illnesses, including autoimmune disorders and inflammatory diseases are associated with, or arise from, years of untreated allergy symptoms.

Colds & Flu: That never seem to go away.

Persistent Aches & Fatigue: is basically a symptom that can occur with any autoimmune disease. Pain is often in the neck and in shoulder muscles extending down the back. Pain can be in the joints and muscles also.

High cholesterol: Consumption of phytosterols 15 minutes prior to a meal helps block the intestinal absorption of cholesterol. Recent studies have shown that both phytosterols and Enzogenol can assist in reducing LDL, and

in increasing HDL levels. In fact, the US FDA issued a rare ruling allowing the health claim that foods containing plant sterols may reduce cholesterol levels. This is only the 12th time the FDA has allowed such a claim.

A randomized, double blind, placebo controlled clinical trial at the University of Guelph showed that Immuno-Care™ can have a beneficial effect on immune parameters. The clinical trial showed a reduction in basophils that release histamine typically found in allergic reactions, and also in Interleukin-6, the cause of inflammation and pain.

The study also verified that Immuno-Care™ can reduce circulating levels of LDL cholesterol and may increase circulating levels of HDL cholesterol. Urologists in Germany have been using phytosterols for the treatment of enlarged prostate conditions for over 20 years.

Ingredients / Source of Ingredients:

Plant sterols 300mg (beta-sitosterol 117mg), Cellasate™ 50mg, Enzogenol™ 20mg, in a base of rice flour. Derived from non genetically modified soy, proanthocyanidins from pine bark, fruit, essential fatty acids from oil producing seeds, in a 100% vegetable derived capsule.

SUGGESTED ADULT USAGE

As a dietary supplement adults can take one capsule a day, half an hour before a meal, on an empty stomach, with water, or fruit juice, but not milk or drinks containing fat.

Caution: if you are pregnant, nursing, diabetic, taking medication, or under the care of a physician, consult your physician before taking this supplement. Organ, or tissue transplant recipients, must not take this supplement. Keep out of the reach of children.
